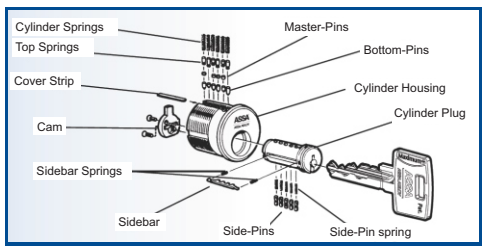
*Ask customer service about information on restricted side bars/keyways.

High Security Keyways

ASSA High Security Locks provide the advantage of guarding against unauthorized duplication and ensuring positive owner identification. ASSA's key control lets you control who has duplicate keys. unlike conventional keys, the ASSA key has two sets of cuts; each with its own special coding to operate the cylinder locking mechanism. The unique side bar code is always cut and registered at the Assa factory. Keyblanks are available only to professional locksmiths and distributors who can produce keys in accordance with ASSA's levels of security.



Twin 6000

Classic released in 1981, was assa's first key system to employ patented side bars, providing optimum pick resistance and key control.
Twin 6000 allows the user to "own" their own private key section.
The twin 6000 was the first ASSA key system to earn the UL 437 rating, a series of tests designed to measure resistance to picking, pulling, drilling, & forcing attacks.

Twin V-10

Released in 1996,
ASSA brought to market a new patented key and cylinder design that helped to eliminate unauthorized duplicate keys. The very narrow keyway was designed to stop picking tools from easily entering the cylinder. Multiple pitched side pins allow the possibility of having more than a million locks keyed differently operated by a single master key

Maximum +

Launched In 2013, features the most sophisticated state of the art mechanical locking technology on the market today. Utilizing our trademarked security ridge™
on the key, the maximum+ system offers a level of patented protection unmatched by industry standards. The maximum+ carries
a utility patent that extends until 2030.

CLIQ Remote

Electro- Mechanical key system was released in 2004. The unique design provides a high security key and cylinder combination with an added electronic access control feature. Ask customer service for more information on CLIQ technology.

Mortise Cylinders

Accredited Lock Stock Finishes: 605(US3),624(US10B),626(US26D) (Other Finishes Are Special Order)

ASSA Mortise Cylinders are designed to replace several original manufacturers' cylinders in their locksets, offering the highest level of security available on the market today. Made to standard U.S. dimensions, these rugged cylinders are available in a variety of finishes and lengths and stand up to even the heaviest abuse. All ASSA high security mortise cylinders are listed under U.L. 437, a set of tests for determining the cylinder's physical resistance against various forms of attack. ASSA mortise cylinders will improve the security of standard mortise locksets by Arrow, Corbin, Sargent, Schlage, Yale and many other manufacturers.

Benefits:

- Drill resistant cylinder housing and plug
- Case-hardened steel inserts and stainless steel pins
- Two independent locking mechanisms to ensure optimum pick resistance
- Inactive "False" gates in side pins designed to increase pick resistance
- Counter-Mill in each chamber position to further enhance pick resistance
- Extremely close tolerances
- Can be easily re-keyed in the field
- 1-1/8" mortise cylinder is easily converted to rim cylinder with kit sold separate. (see bottom of previous page)
- Available in cylinder lengths 1-1/8" through 2" increments
- 13 cam options available
- Cylinder housing and plug are made of high quality brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

All mortise cylinders are stocked SNS (sub assembled, no sidebar)

Rim/Mortise Cylinders

Accredited Lock Stock Finishes:605(US3), 624(US10B),626(US26D) (other finishes are special order)

Commonly used on apartment and condominium doors, ASSA rim cylinders are used on vertical deadbolt locks and are also designed for commercial exit and panic devices. Available with either horizontal/vertical break-off or lazy-motion type break-off tailpieces, the standard rim cylinder can be easily converted to a mortise cylinder by simply replacing the rim tailpiece assembly with the appropriate cam.

Rim Cylinders Are Stocked "H" For Horizontal,
But Can Easily Be Converted
To "V" For Vertical Tail Piece.

*Same specifications and finishes as ASSA mortise cylinders listed on previous page
