School Safety & Security: Introducing Aegis Indicator Locks

In this training session, we will focus on enhancing the safety and security of school facilities through locking solutions. Learn how our Aegis Indicator Locks can revolutionize the way schools manage access and respond to emergencies. These innovative locks allow for real-time visibility of door status, providing instant awareness of whether doors are locked or unlocked. Ideal for improving security during critical situations, our Aegis Indicator Locks offer an essential solution for schools seeking to proactively safeguard their students, staff, and property. Join us to discover how these products can be seamlessly integrated into your existing safety protocols for maximum protection.

Key Takeaways:

- Overview of school security challenges
- Introduction to Aegis Indicator Locks and their key features
- Best practices for implementing the locks in school environments
- Enhancing emergency response times and preventing unauthorized access
- Live demonstration of lock functionalities and installation tips

Ligature-Resistant Locks: Ensuring Safety in Sensitive Environments

Join us for an in-depth session focused on our Ligature-Resistant Locks, the trusted solution for healthcare facilities, correctional institutions, and other high-risk environments. Known for our expertise in creating products that help mitigate ligature risks, this training will cover the features that make our locks ideal for preventing self-harm in sensitive settings. Attendees will learn about the unique design and functionality of ligature-resistant locks, and how they help maintain safety and security without compromising accessibility. Gain insight into compliance standards and how our locks provide peace of mind for both facility managers and residents alike.

Key Takeaways:

- Understanding ligature risks and the importance of preventive measures
- Comprehensive overview of ligature-resistant lock design and features
- How our locks ensure compliance with safety regulations and standards
- New product development and functionalities
